

JOB POSTING:

Please note that INSA is sharing this job posting only for informational purposes. As an organization, we do not hold any responsibility for the job position/description or can influence the decision in any way.

Job Position: Software Developer/ Software Engineer

Location: Feltham, London

About Us:

We are a specialized IT Company which help companies to derive the measurable business value that they have always been looking for from business and IT investments.

The Candidate would be working in a dynamic environment in addition to enhancing software engineering skills, will be given the opportunity to experience different disciplines within the business.

What we are looking for:

We welcome freshers from postgraduate courses with degrees like MBA, M.Sc, MCA who have an interest in IT, to join our multidisciplinary team of specialists and consultants in our UK office. We can sponsor people who require sponsorship.

IT Skills:

- Being part of a systems implementation project (design, build, test, implement)
- Analyzing data patterns and behaviors to build business intelligence solutions and gain insight from engineering data
- Undertaking analysis to gather business requirements to build or improve our information systems
- Building cloud services to platform digital solutions for our clients
- Supporting global systems addressing frequently occurring incidents and events
- Developing software tools and utilities to help our designers and engineers be more efficient.
